NEW CITY LIGHT
LIGHTING THE WAY

Symbol concepts

Proposals only. None of these replaces the master artwork until NCL approves it.

FOR REVIEW · OCTOBER 2026

WHY

The symbol on its own

Next to the wordmark the logo is clearly New City Light. On its own (app icon, avatar, favicon) an orange radiating star with an empty centre looks like the “spark” marks used by several tech and AI brands. Most people see the symbol alone at small sizes, so that is where the likeness matters most.

BEFORE · WHITE ON ORANGE · RETIRED

NOW · ORANGE ON NAVY · PRIMARY

DONE ALREADY, NO LOGO CHANGE

- **Navy app icon** is now the primary icon and favicon. The guidelines are updated.
- **White-on-orange tile retired** for icons and avatars. It is the closest match to other spark marks.
- Use the **full lockup** wherever there is room. The likeness only appears when the symbol stands alone.

STILL OPEN

- Should the symbol itself change? The next pages show six options, all built from the master geometry.
- Before the ® is relied on, have a trademark attorney run a clearance search on whichever symbol is chosen.

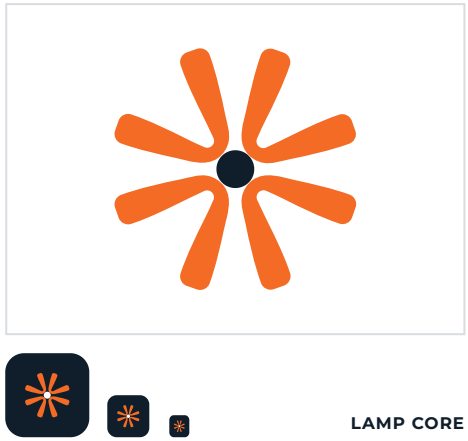

OVERVIEW

Seven symbols side by side

The master plus six alternatives. Each one is shown with its navy icon at 64, 32 and 16 px. Judge them at the smallest size first: that is where the problem is.

MASTER (CURRENT)

LAMP CORE

TWO-TONE

PINWHEEL

BEAMS

RISING LIGHT

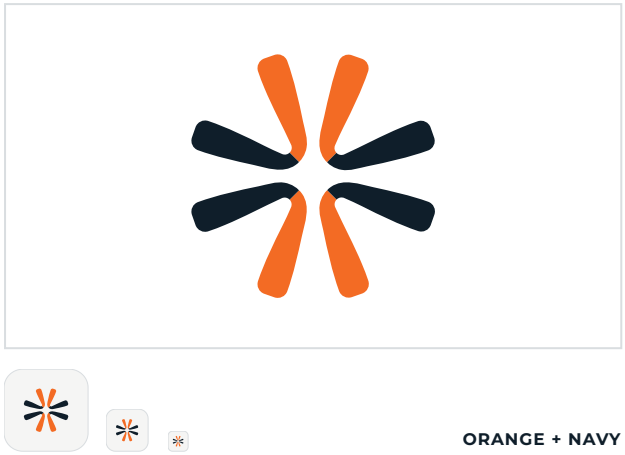

LENS

COLOUR ONLY

Same symbol, new colours

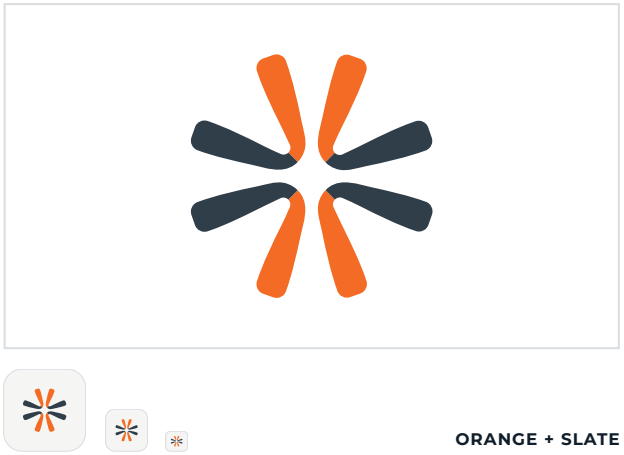

No change to the shape, so every existing file, the stamp and the pattern stay valid. Colour does most of the work on screens and in full-colour print. In one-colour uses (stamp, embossing) the shape is unchanged, so the likeness stays there.

ORANGE + NAVY

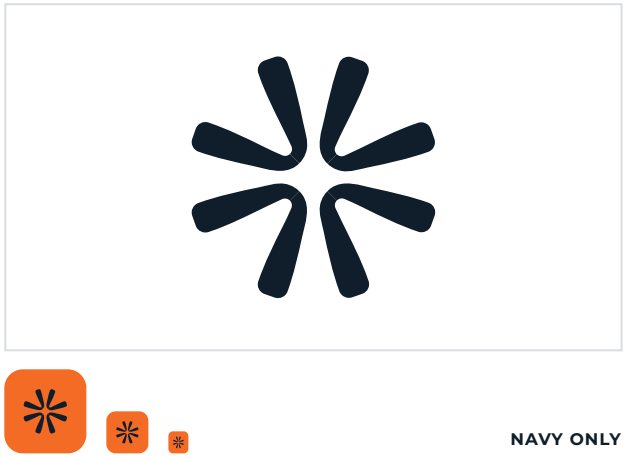

NAVY + ORANGE

ORANGE + SLATE

ORANGE + WHITE ON NAVY

NAVY ONLY

ORANGE ON NAVY

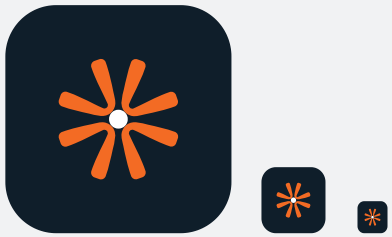

CONCEPT B

Lamp core

A solid dot fills the empty centre: a light source the petals radiate from. Smallest possible change.

ON LIGHT

APP ICON · 128 / 32 / 16 PX

ON NAVY

IN THE LOCKUP (MOCK-UP, NOT FINAL SPACING)

DISTANCE FROM GENERIC SPARK MARKS

Low

FOR

Tiny change; keeps all existing artwork recognisable. Gives the symbol a clear meaning: a light source.

AGAINST

Still an eight-ray starburst. Helps, does not solve.

Built from the master petal geometry with no redrawing. A designer should refine curves, weights and spacing before anything is final.

CONCEPT C

Two-tone

Vertical petals in orange, horizontal petals in navy. Ties the symbol to the wordmark colour; no single-colour spark reads like this.

ON LIGHT

APP ICON · 128 / 32 / 16 PX

ON NAVY

IN THE LOCKUP (MOCK-UP, NOT FINAL SPACING)

DISTANCE FROM GENERIC SPARK MARKS

Medium–high

FOR

Navy ties the symbol to the wordmark. Same geometry, so every existing application still works.

AGAINST

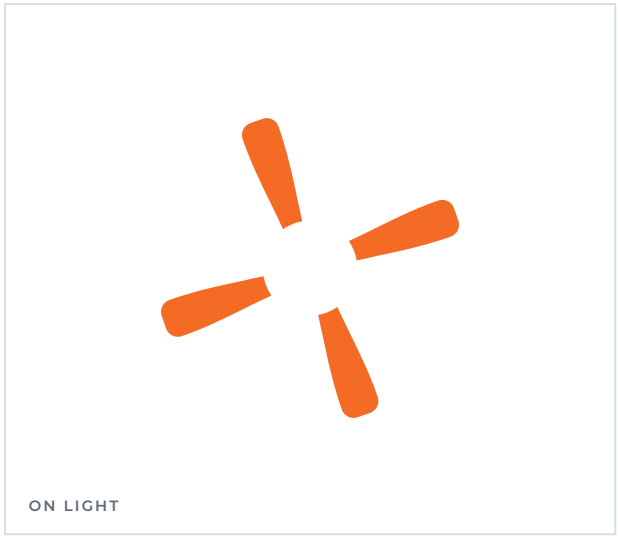

Only works in colour. One-colour uses (stamp, embossing, bag) fall back to the master.

Built from the master petal geometry with no redrawing. A designer should refine curves, weights and spacing before anything is final.

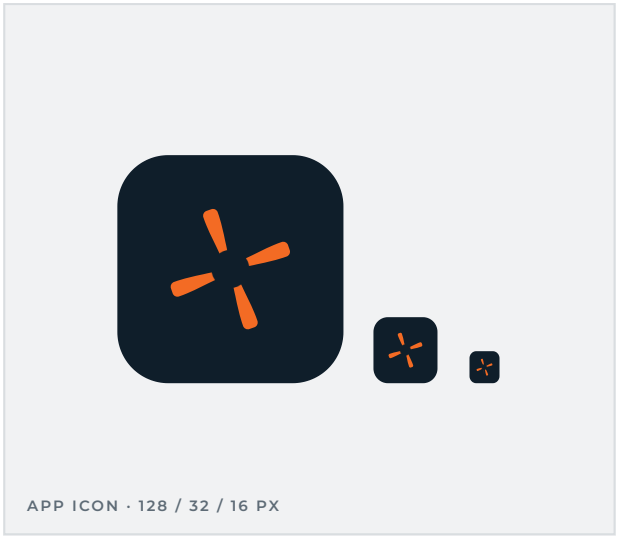

CONCEPT D

Pinwheel

One petal from each pair, in rotation. Four blades read as motion and a turbine, not a spark.

ON LIGHT

APP ICON · 128 / 32 / 16 PX

ON NAVY

IN THE LOCKUP (MOCK-UP, NOT FINAL SPACING)

DISTANCE FROM GENERIC SPARK MARKS

High

FOR

Clear break. Reads as motion, energy, a turbine.

AGAINST

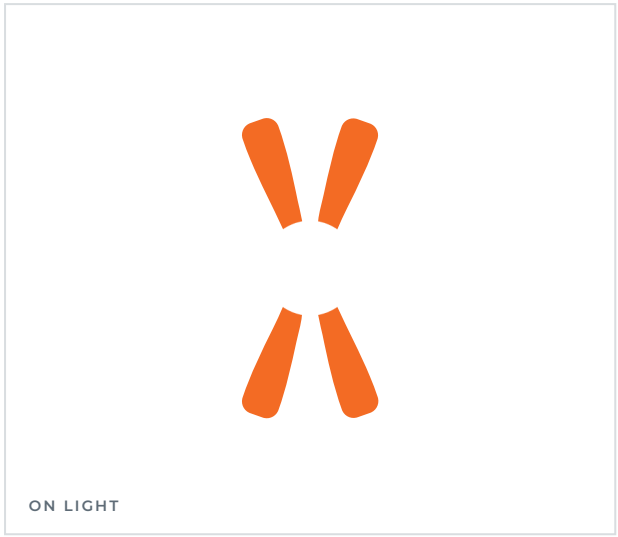

Can read as a fan, which is the wrong product for a lighting company. Thin bases at small sizes.

Built from the master petal geometry with no redrawing. A designer should refine curves, weights and spacing before anything is final.

CONCEPT E

Beams

Only the vertical petals: light thrown up and down like a wall washer. Strong silhouette at favicon size.

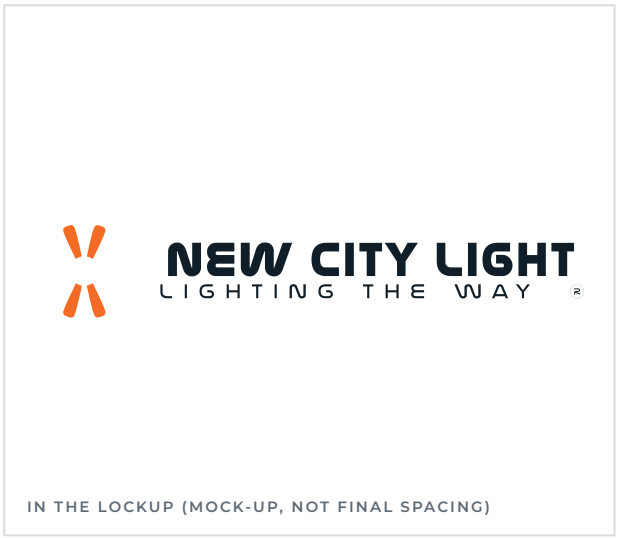

ON LIGHT

APP ICON · 128 / 32 / 16 PX

ON NAVY

IN THE LOCKUP (MOCK-UP, NOT FINAL SPACING)

DISTANCE FROM GENERIC SPARK MARKS

High

FOR

Bold, simple silhouette; survives a 16 px favicon.

AGAINST

Loses the radiance of the original. Can read as an hourglass or an “X”.

Built from the master petal geometry with no redrawing. A designer should refine curves, weights and spacing before anything is final.

CONCEPT F

Rising light

Top half of the symbol over a horizon bar: light rising over the city. Closest to “Lighting the Way”.

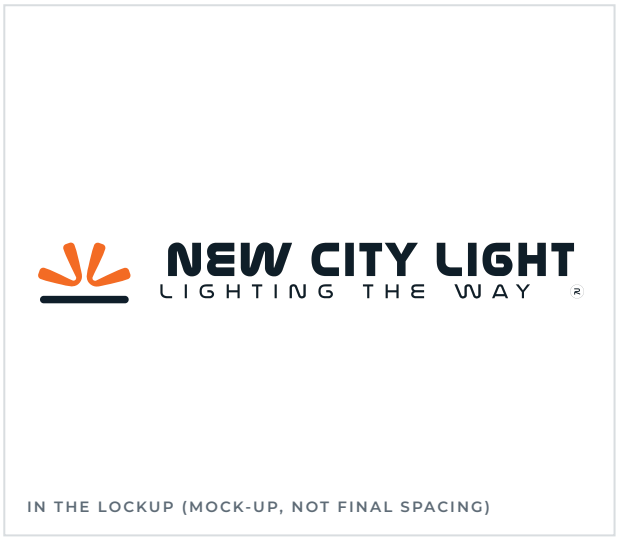

ON LIGHT

APP ICON · 128 / 32 / 16 PX

ON NAVY

IN THE LOCKUP (MOCK-UP, NOT FINAL SPACING)

DISTANCE FROM GENERIC SPARK MARKS

High

FOR

Most on-message: light rising over the city, “Lighting the Way”. Distinctive in the lockup.

AGAINST

Wide, not square, so weaker as an app icon. Sunrise marks are common in other sectors.

Built from the master petal geometry with no redrawing. A designer should refine curves, weights and spacing before anything is final.

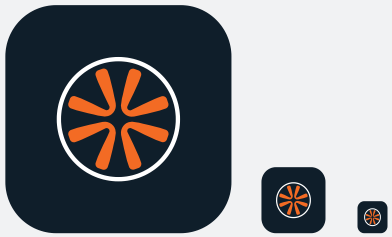

CONCEPT G

Lens

The master symbol held inside a thin ring, like a luminaire seen from below. Encloses the mark so it stops reading as a loose spark.

ON LIGHT

APP ICON · 128 / 32 / 16 PX

ON NAVY

IN THE LOCKUP (MOCK-UP, NOT FINAL SPACING)

DISTANCE FROM GENERIC SPARK MARKS

Medium

FOR

Encloses the mark so it becomes a badge, like a luminaire seen from below. Good for seals and signage.

AGAINST

The ring disappears at favicon size, where the likeness is worst.

Built from the master petal geometry with no redrawing. A designer should refine curves, weights and spacing before anything is final.

RECOMMENDATION

What we would do

Keep the navy icon (done). Then pick one of two routes, depending on how far NCL wants to move.

Route 1 · Two-tone

Lowest risk. Same symbol, recoloured. No reprint of one-colour items (stamp, bag). Business cards, signage and digital pick it up at the next print run.

Route 2 · Rising light

A real break, and the closest to “Lighting the Way”. Needs a square icon variant, new lockups and a full artwork update. Only worth it if NCL is still early in the rollout.

BEFORE DECIDING

- Show the shortlist to a few customers at icon size and ask what they see.
- Have a designer refine the chosen option. These are built from the master geometry, not finished artwork.
- Trademark clearance search on the chosen symbol (lighting is a different class from software, but check).
- Update the master files, then rebuild this pack: *python3 build/build_all.py*.
